

"REACH" Regulation 1907/2006/CE
Concerning registration, evaluation, authorization and restriction of chemicals
(REACH: Registration, Evaluation, Authorization and Restriction of Chemicals)

Following up the regulation above our company declare:

SAF s.r.l. produces items using raw materials and semi-finished products which, as at today's date, may contains substances identified as SVHC (Substances of Very High Concern), included in the list of substances requiring authorization.

SAF S.r.l. declares that depending on the raw materials used, some products may contain some Lead in quantity above 0,1% in weight (substance listed on SVHC on 27/06/2018). Being listed on SVHC does not imply any change in the conditions of use of the products, also considering that SAF products are meant for an industrial use and not for a direct, prolonged contact with people.

The normal or reasonably foreseeable use of our articles, therefore does not require particular precautions. The only recommendation is to avoid cutting or drilling our articles when they disposed of at the end of their useful life, as this could cause exposure to the above substance or its dispersion in the environment.

SAF S.r.l. will strive to periodically monitor the "Candidate List" of the SVCH substances, updated by ECHA and to promptly inform all parties involved it new SVHC substances are present in our products.

What here above declared relieves our customers from the need to notify ECHA (European Chemicals Agency) about new substances as a consequence of the use of our products.

Carbonate, 20/09/2023

In witness whereof

The Managing Director

SAF s.r.l.
